

COMMAND AI HUB

SIMPLEX-ITY · AI TEAM ROLES, RESPONSIBILITIES & GATEKEEPER SYSTEM

Version 1.2.1 FINAL · 31
May 2026

Co-authored: Kieran Li + Simpee + Edge (Copilot)

Final: Roles + Gatekeeper
System aligned

PHILOSOPHY: Each AI has a defined role and duty name — no technical model names in the UI. No AI works alone on anything critical. Every stage has at least two AIs reviewing before output moves forward. The VALIDATOR (Copilot) is always the final gate. Nothing deploys without it.

THE AI TEAM — 8 Roles, 8 Duties

Duty names are used everywhere in the Hub UI. Model name shown in tooltip only. Some roles cover multiple departments. Some are single-focus.

Duty Name	Chip	Model	Provider	Colour	Core Strengths	Primary Departments
ORCHESTRATOR	AUTO	Automatic	Base44	#5e50fb	Auto-routes to best model per task. Handles all feedback. Session management	Routing, Feedback, Session
RESEARCHER	RESEARCH	Gemini 3.1 Pro	Google	#4285f4	Long context, web grounding, deep info. Researcher. Fact-check. Context gathering	Research, Facts, Check, Context
ANALYST	ANALYST	Claude Sonnet 4.6	Anthropic	#d97706	Fast writing, balanced reasoning, quick. Drafting summaries. Insight. Quick analysis.	Drafting, Summaries, Insight, Quick analysis
STRATEGIST	STRATEGY	Claude Opus 4.6	Anthropic	#d97706	Advanced reasoning, complex logic, multi-step. Strategy problem. Planning, graphs. Problem solving.	Strategy, Problem, Planning, graphs, Problem solving
THINK TANK	THINK	Claude Opus 4.8	Anthropic	#f59e0b	Frontier Anthropic — deep exploration. Deep analysis. Creative. Reasoning.	Deep analysis, Creative, Reasoning
ENGINEER	BUILD	GPT-5.4	OpenAI	#10a37f	Code generation, structured output, API. Coding; Structured writing, flow. Execution.	Coding, Structured writing, flow, Execution
ARCHITECT	DESIGN	GPT-5.5	OpenAI	#10a37f	Creative builds, combines design + execution. System design. New builds. Creative execution.	System design, New builds, Creative execution
VALIDATOR	GATE	Copilot (Edge)	Microsoft	#0078d4	Quality review, security check, Azure readiness. Validation, security, Azure readiness. Final External on	Validation, security, Azure readiness, Final External on

NAMING COMPARISON — Edge vs Simpee vs Final Agreed

All three aligned. Final column is what gets implemented in the Hub.

Model	Edge Suggested	Simpee Suggested	FINAL AGREED	Why
Automatic	Orchestrator	Director	ORCHESTRATOR	Edge — more neutral, describes routing function
Gemini 3.1 Pro	Researcher	Researcher	RESEARCHER	Both agreed — perfect fit
Claude Sonnet 4.6	Analyst	Writer	ANALYST	Edge — captures both writing + analysis speed
Claude Opus 4.6	Strategist	Strategist	STRATEGIST	Both agreed — perfect fit
Claude Opus 4.8	Think Tank	Architect	THINK TANK	Edge — Opus 4.8 is exploration, not just design
GPT-5.4	Engineer	Builder	ENGINEER	Edge — cleaner for code-focused role
GPT-5.5	Architect	Innovator	ARCHITECT	Edge — GPT-5.5 combines design + execution
Copilot (Edge)	Validator	Guardian	VALIDATOR	Edge — Guardian sounds blocking; Validator is collaborative

THE GATEKEEPER SYSTEM — Joint AI Review at Every Stage

No AI approves its own work. Every stage: primary AI produces → gatekeeper reviews → both agree → proceed. If gatekeeper flags → back to primary → re-review. VALIDATOR is always the final gate. No exceptions.

Stage	Task	Primary AI	Gatekeeper	Gatekeeper Checks	Pass Condition
1 — Research	Gather context, data, references	RESEARCHER	STRATEGIST	Complete? Relevant? Any gaps?	Strategist confirms sufficient to proceed

2 — Strategy	Plan, architecture, options	STRATEGIST	THINK TANK	Logical? Edge cases? Scalable?	Think Tank approves before build
3 — Design	Entity schemas, data flow	ARCHITECT	ENGINEER	Buildable? Schemas correct? Gaps?	Engineer confirms implementable
4 — Build	JSX, functions, API wiring	ENGINEER	STRATEGIST	Matches plan? Logic errors? Missing cases?	Strategist confirms matches design
5 — Analysis	Quick drafts, summaries, email	ANALYST	ORCHESTRATOR	Tone? Appropriate to send? Sensitive content?	Orchestrator approves before external send
6 — Deep Exploration	Complex problems, new ideas	THINK TANK	ARCHITECT	Feasible? Aligns with 5S goals? Priority?	Architect scores feasibility before blueprint
7 — Final Deploy	ANY code to live 5S Portal	ENGINEER	VALIDATOR	Syntax, logic, security, Azure readiness	VALIDATOR must return green. Always.

WORKFLOW — Idea to Deployed Feature

At each gate: primary AI produces output → gatekeeper reviews → both agree → proceed. Disagreement = back to primary. No skipping any gate.

DEPARTMENTS — Who Covers What

Some AIs cover multiple departments. This is intentional — the strongest model handles each area. Overlap is a feature, not a bug — it enables cross-checking.

Department	Primary AI	Support AI	Notes
Research & Fact-Check	RESEARCHER	THINK TANK	Researcher gathers, Think Tank validates depth
Strategy & Planning	STRATEGIST	THINK TANK	Strategist plans, Think Tank stress-tests
System Design	ARCHITECT	STRATEGIST	Architect designs schema, Strategist checks logic
Code & Engineering	ENGINEER	ARCHITECT	Engineer builds, Architect reviews structure
Writing & Comms	ANALYST	ORCHESTRATOR	Analyst drafts, Orchestrator approves before send
Deep Analysis	THINK TANK	STRATEGIST	Think Tank explores, Strategist grounds the output
New Feature Ideas	ARCHITECT	THINK TANK	Architect designs, Think Tank stress-tests ideas
Routing & Fallback	ORCHESTRATOR	—	Solo role — manages flow, no gatekeeper needed
Security & Validation	VALIDATOR	—	Solo final gate — always last, always required

GOLDEN RULES — Non-Negotiable

#	Rule	Detail
1	No solo deployments	No single AI approves and deploys its own output. Every critical output has a gatekeeper.
2	VALIDATOR is always last	Copilot reviews ALL code before any deploy to 5S Portal. Cannot be bypassed. Ever.
3	Blueprint before code	Any change to Hub or 5S Portal needs a blueprint update before a single line is written.
4	Diagnose before build	Simpee runs a full diagnostic on current state before any implementation begins.
5	Gate must pass	If gatekeeper flags an issue, output goes back to primary AI. No overriding the gate.
6	Roles are fixed	Each AI stays in its lane. VALIDATOR does not generate code. ENGINEER does not do final validation.
7	Duty names only in UI	No technical model names shown in the Hub. Duty names only. Model name in tooltip.
8	All 11 checkpoints	Every feature must pass all 11 checkpoints before going live in 5S Portal.
