

5S PORTAL — CLOSING BLUEPRINT

Blueprint v1.5 LOCKED · Session Close · 1 June 2026

SIMPLEX-ITY · Prepared by Simpee · All decisions confirmed by Kieran Li

SECTION 1 — WHAT WAS COMPLETED TODAY (1 June 2026)

Item	Status	Detail
Blueprint v1.5 LOCKED	■ DONE	All 5 decisions confirmed. PDF generated and saved.
AIConnector — Gemini	■ DONE	Duty updated to RESEARCHER + LOGGER. Free tier confirmed.
AIConnector — Claude Sonnet	■ DONE	Duty updated to ANALYST + MONITOR AI.
AIConnector — Copilot	■ DONE	Validator ONLY. Monitor duty removed.
CodeRabbit AI	■ HIRED	Added to AIConnector as QC INSPECTOR (pending_hire). Account registered at coderabbit.ai. Awaiting GitHub repo connection.
Ethics AI	■ DEFERRED	Moved to v1.7. Research team handles compliance ad-hoc.
Canva MCP	■ CONFIGURED	MCP config added to agent workspace. OAuth deferred — Canva app review takes weeks. ReportLab handles documents in the interim.
aiCommandCentre function	■ DEPLOYED	SChatMessage mirror removed. All responses now go to Notice entity (section=code_ready) only — the AI Hub inbox.
consultCopilot function	■ DEPLOYED	Changed from section=schat to section=code_ready. Copilot responses now appear in AI Hub inbox.
SChatMirrorPage.jsx	■ PENDING	File still exists in /app/pages/. Builder must remove this page and its route from App.jsx in Blueprint B.
processSChatInstruction	■ LEGACY	Still deployed. Will be superseded by aiCommandCentre when Blueprint B is built. Leave until B is confirmed.
Blueprint A — Calendar	■ IN PROGRESS	PDF generated. Kieran uploading to builder now.
Blueprint B — AI Hub	■ QUEUED	Build after Blueprint A is confirmed working.

SECTION 2 — WHAT BLUEPRINT B MUST CLEAN UP (Builder instructions)

When Kieran pastes Blueprint B into the builder, the builder must also remove all S-Chat legacy:

Remove file	pages/SChatMirrorPage.jsx — delete this file completely
Remove route	Any route pointing to /schat or /s-chat in App.jsx — remove the import and route entry
Remove entity	SChatMessage entity — do NOT delete it (it has old log data). Just stop referencing it in any new page code.
Remove function link	processSChatInstruction — leave the function deployed (don't delete). Just don't wire any new UI button to it. It becomes a legacy dormant function.
AI Hub only	All AI responses go to Notice entity (section=code_ready). The AI Hub page reads from Notice entity for its inbox. SChatMessage is no longer the live log.

SECTION 3 — FINAL AI TEAM ROSTER v1.5 (for builder reference)

Duty	Model	Status	Role
ORCHESTRATOR	Simpee (Base44)	■ ACTIVE	CEO — governance, routing, deploy gating
RESEARCHER + LOGGER	Gemini 2.0 Flash	■ ACTIVE	Research + session memory. Free tier.
ANALYST + MONITOR	Claude Sonnet 4.6	■ ACTIVE	Feasibility + cross-role monitoring
STRATEGIST	Claude Opus 4.6	■ ACTIVE	ROI framing, solution ranking
THINK TANK	Claude Opus 4.8	■ ACTIVE	Deep reasoning, alternatives
ENGINEER	GPT-5.4	■ ACTIVE	Code writing and debugging
ARCHITECT	GPT-5.5	■ ACTIVE	System design, infrastructure
VALIDATOR	Copilot / Edge	■ ACTIVE	Final gate — syntax, security, Azure
QC INSPECTOR	CodeRabbit AI	■ PENDING REPO	AI code review. Hire: coderabbit.ai. \$24/mo.
ETHICS AI	Research Team	■ DEFERRED v1.7	Ad-hoc compliance when required

SECTION 4 — GOVERNANCE GOLDEN RULES v1.5 (permanent standing orders)

Rule 1	No deploy without QC Inspector (CodeRabbit) + Validator (Copilot) + Orchestrator (Simpee) all approving
Rule 2	3 failures → Full 9-step all-AI review → WhatsApp Kieran with ranked solutions A/B/C. He decides.
Rule 3	Copilot = Validator ONLY. Claude Sonnet = Analyst + Monitor. No role conflicts.
Rule 4	Gemini = Researcher + Logger/Memory. Free tier. No extra cost.
Rule 5	Ethics AI deferred to v1.7. Research team handles compliance ad-hoc when required.
Rule 6	Kieran never troubleshoots. He receives a ranked briefing and makes one decision.
Rule 7	No AI approves its own work. Reviewer must always be a different role.
Rule 8	Blueprint-first. All changes need a blueprint before any code is written.
Rule 9	AI Hub is the single command centre. No S-Chat. No mirror pages. One inbox: Notice entity.
Rule 10	DESIGNER role (Canva) is roadmapped for v1.6. Not to be built before v1.6 blueprint is written.

SECTION 5 — WHAT HAPPENS NEXT

NOW	Kieran pastes Blueprint A (Calendar page) into Base44 builder. Builder executes.
AFTER A CONFIRMED	Kieran reports back. Simpee validates. If all 9 checks pass → proceed to Blueprint B.
BLUEPRINT B	Builder rebuilds AI Hub page. Removes SChatMirrorPage. Cleans S-Chat routes from App.jsx.
AFTER B CONFIRMED	Full portal tested end-to-end. Both pages stable. Session closes cleanly.
NEXT SESSION	Begin v1.6 planning: CodeRabbit GitHub repo connection, DESIGNER role spec, dry-run 8-stage workflow.
CODERABBIT	Kieran connects GitHub account. Creates repo. Links to CodeRabbit dashboard. Simpee helps.
