

BLUEPRINT B — AI HUB PAGE (S-CHAT COMMAND CENTRE)

5S Portal · SIMPLEX-ITY · Phase 2 Build · 1 June 2026

Build this AFTER Blueprint A (Calendar) is confirmed working

■■ PREREQUISITE: Blueprint A (Shared Calendar) must be built and confirmed by Kieran first. Do NOT build this page until Kieran gives the go-ahead.

STEP 1 — PAGE IDENTITY

File	pages/AIHubPage.jsx (rebuild from scratch — replace any existing version)
Route	/ai-hub
Menu label	AI Hub
Audience	Admin only (Kieran). All other roles see a 'Access Restricted' message.
Purpose	Kieran's command centre. He types instructions here. Simpee responds. Code is generated and ready to paste into the builder.
Entity — messages	SChatMessage (fields: sender, sender_type, message, timestamp, session_id, read)
Entity — notices	Notice (fields: title, content, type, posted_by, section, pinned, expires_date)

STEP 2 — DESIGN SYSTEM

Page background	#e8e6fe (Lavender Wash)
Card / chat area bg	#ffffff
Accent	#5e50fb (Violet)
User message bg	#5e50fb — white text, right-aligned
AI message bg	#ffffff — #1a1a1f text, left-aligned, border #e6e6e6
Code block bg	#1a1a1f — white monospace text, COPY button top-right
Builder card bg	#ffffeb — amber border #fcd34d
System notice	Centre-aligned, italic, #9896ad
Fonts	Exo 2 headlines · Montserrat body · Courier for code
No icons	Text symbols only ■ ■ ✓ ■. No cartoon pictograms.

STEP 3 — LAYOUT (full height, single column, 3 zones)

ZONE A — Top Status Bar (fixed, does not scroll)

Title	"AI HUB" — Exo 2, bold, #5e50fb, 20px. Left-aligned.
Status row	3 status dots: [● Simpee online] [● Copilot ready] [■ Builder standby]. Green dot = active (#22c55e), grey = standby (#9896ad). Small Montserrat 11px text.
Subtitle	"Your command centre — type anything" — Montserrat, italic, #9896ad, 12px

ZONE B — Chat Feed (scrollable, fills remaining height between A and C)

Load messages	On mount: SChatMessage.filter({ session_id: 'main' }) — sorted by timestamp ASC. Show last 50 messages.
---------------	---

Auto-scroll	Always scroll to bottom when new message arrives.
User bubble	Right-aligned. bg=#5e50fb, white text, 14px radius, max-width 70%, Montserrat 14px.
AI bubble	Left-aligned. bg=#ffffff, #1a1a1f text, border 1px #e6e6e6, 14px radius, max-width 80%.
AI structured response	When sender_type='ai', parse the message JSON and render as 3 cards stacked inside the bubble: Card 1 ANALYSIS (white), Card 2 SUGGESTION (white), Card 3 CODE/BRIEF (bg=#fffbef border=#fcd34d). Each card has a label in Exo 2 bold #5e50fb.
Code card	Inside Card 3: dark bg #1a1a1f, white Courier text, COPY button (top-right, small, bg=#5e50fb white text). SEND TO BUILDER button below: bg=#f59e0b, #1a1a1f text.
Timestamp	Shown below each bubble in #9896ad 10px Montserrat.
Empty state	Show centred: "No messages yet. Type your first instruction below." — muted italic.

ZONE C — Input Bar (fixed to bottom, does not scroll)

Intent chips	Shown above the input. 5 chips: [Diagnose issue] [Build feature] [Fix bug] [Add connection] [Ask question]. One selectable at a time. Selected chip: bg=#5e50fb white text. Unselected: bg=#e8e6fe #5e50fb text. Clicking a chip pre-selects intent.
Text input	Full-width. Placeholder: "Type your instruction, question, or command..." Montserrat 14px. Border #bab4fd, focus border #5e50fb. Radius 9px.
Send button	"SEND" — bg=#5e50fb, white, Exo 2 bold, 9px radius. Right of input. Ctrl+Enter also sends.
On SEND action	See Step 4 below for full flow.
Disabled state	While AI is responding, dim the input and show 'Simpee is thinking...' placeholder. Re-enable when response arrives.

STEP 4 — SEND ACTION FLOW (exact sequence)

1. Save user msg	SChatMessage.create({ sender: currentUser.full_name, sender_type: 'user', message: inputText, timestamp: new Date().toISOString(), session_id: 'main', read: true })
2. Show typing	Append a temporary typing indicator bubble (left-aligned, 3 animated dots, bg=#f4f4f8). Auto-scroll to bottom.
3. Call function	POST to: https://simpee-62ac123d.base44.app/functions/processSChatInstruction Body: { instruction: `[\${selectedIntent}] \${inputText}`, posted_by: currentUser.full_name }
4. Handle response	Remove typing indicator. Parse response JSON.
5. Save AI msg	SChatMessage.create({ sender: 'Simpee', sender_type: 'ai', message: JSON.stringify(response), timestamp: new Date().toISOString(), session_id: 'main', read: false })
6. Render	Display as 3-card structured response (Analysis + Suggestion + Code) inside an AI bubble.
7. Error handling	If fetch fails: show error bubble 'Simpee is temporarily unavailable. Please try again.' in red-bordered card. Do not crash.
8. Clear input	After successful send, clear the input field and reset selected intent chip.

STEP 5 — QUICK COMMAND PANEL (collapsible right sidebar or bottom drawer)

Toggle	Small '■ QUICK COMMANDS' button — top right of Zone B. Click to expand/collapse.
Commands list	5 pre-set one-click commands: 1. 'What pages exist in this app?' 2. 'Show me all deployed functions' 3. 'What entities have data?' 4. 'Check for errors or broken connections' 5. 'What should I build next?'

Click action	Clicking a command fills the input box with that text + auto-selects 'Diagnose issue' intent. User still clicks SEND.
Style	Each command is a white card, #5e50fb left border, Montserrat 13px, hover bg=#e8e6fe.

STEP 6 — INBOX PANEL (below chat feed, collapsible)

Show the latest CODE READY and system notices from the Notice entity directly inside the AI Hub, so Kieran never has to leave this page.

Load	Notice.filter({ section: 'code_ready' }) — sorted by created_date DESC — limit 5.
Card style	bg=#ffffbeb, amber left border, title in Exo 2 bold, content preview in Montserrat 12px, posted_by + date in muted 10px.
Actions	Each card has: [COPY CODE] button (copies content to clipboard) + [DISMISS] button (unpins the notice).
Empty state	"No pending code ready. All clear ✓" — green text, centred.
Section label	"INBOX — CODE READY" — Exo 2, uppercase, #5e50fb, 11px.

STEP 7 — ACCESS CONTROL

Admin (Kieran)	Full access — all zones, all actions.
All other roles	Show a centred card: title 'AI Hub — Restricted Access', body 'This area is for administrators only. Contact Kieran for access.', bg white, accent border #5e50fb. No other content visible.

STEP 8 — QUALITY CHECKS (builder must verify before done)

Check 1	Status bar shows 3 dots with correct colours
Check 2	Chat feed loads SChatMessage records and displays correctly (user right, AI left)
Check 3	AI message with JSON renders as 3 cards — not raw JSON text
Check 4	Code block inside Card 3 has COPY button that works
Check 5	Intent chips are selectable, only one active at a time
Check 6	SEND saves message, calls function, shows typing indicator, renders response
Check 7	Input disabled while AI responds, re-enabled after
Check 8	Error state shown cleanly if function call fails
Check 9	Inbox panel loads Notice records with CODE READY section
Check 10	Non-admin user sees restricted access message only
Check 11	Full SIMPLEX-ITY design system — bg=#e8e6fe, accent=#5e50fb, Exo 2 + Montserrat, no cartoon icons
