

COMMAND AI HUB

BLUEPRINT v1.3.1 — AUTO ASSEMBLY · SANDBOX · FILE UPLOAD · PRE-SCREEN

Version 1.3.1 · 31 May 2026

Build AFTER v1.3 (Memory Layer) passes all 11 checkpoints

5 new features · Simpee stays Simpee

WHAT'S IN v1.3.1: Five new features requested by Kieran — making the Hub smarter, safer, and more collaborative. Simpee pre-screens every question and auto-assembles the right team. A live indicator shows who is working. A Sandbox protects production from draft experiments. Files can be shared directly in chat. And before any deep dive, the team runs a Pre-Screen Feasibility check so everyone knows what they're getting into. **Build after v1.3 Memory Layer is live and validated.**

PREREQUISITE

Build ONLY after Blueprint v1.3 (AI Persistent Memory + OneDrive Sync) passes all 11 checkpoints. All 8 AIConnector records must be live with intro_message, voice_style, and handoff_to fields populated.

FEATURE 1 — Auto Team Assembly

Kieran submits a question. Simpee reads it, decides which 2 AIs are best suited, and assembles them automatically. No need to manually pick chips. The right people just show up.

Question Type	Primary AI	Support AI	Logic
Research / market data	RESEARCHER	ANALYST	Need data first, then a clear summary
Build / code / function	ENGINEER	ARCHITECT	Need design then implementation
Strategy / planning	STRATEGIST	THINK TANK	Need logic then stress-test
Error / bug / diagnosis	ENGINEER	STRATEGIST	Need fix then validation of root cause
Business / market analysis	RESEARCHER	STRATEGIST	Need data then feasibility
Brand / design / visual	ARCHITECT	ANALYST	Need structure then brief
Any deploy / validation	Best 2 for task	+ VALIDATOR always validated as one	Validation never skipped on deploys

UI Flow — What Kieran Sees

Step	What Appears in Chat
1 — Submit	Kieran types question and hits send
2 — Simpee reads	Slim banner: 'Simpee is reading your request...' (0.5s)
3 — Assembly	Banner updates: '[RESEARCHER] + [ANALYST] assembling...' — both chips pulse violet in left panel
4 — Working	Per-AI typing indicator: 'RESEARCHER is working...' with animated dots
5 — Response 1	RESEARCHER response card appears with their intro line (first time in session)
6 — Handoff	Transition line: 'RESEARCHER passing to ANALYST...'
7 — Response 2	ANALYST response card appears — summary of RESEARCHER's findings
8 — Done	Banner clears. Both AI cards return to steady state in left panel.

FEATURE 2 — Live Working Indicator

Always know exactly which AI is active, what they are doing, and how long it is taking. No more staring at a blank screen wondering if something is happening.

Indicator	Location	Behaviour
-----------	----------	-----------

Pulsing violet ring	Left panel — active AI card	Glows violet while that AI is generating. Returns to normal when done.
Progress bar	Centre panel — top edge	Slim animated bar slides across while any AI is working. Disappears on completion.
Typing dots	Centre panel — in chat	'RESEARCHER is working...' with 3 animated dots. Per AI, per response.
Handoff transition	Centre panel — between cards	'RESEARCHER passing to ANALYST...' with a right-arrow animation between cards.
Response timer	Each response card — footer	'Responded in 3.2s' shown in muted text below each AI response.
Queue indicator	Left panel — bottom	If 3 AIs called: '2 in queue' shown below active AI. Updates as each finishes.

FEATURE 3 — Project Sandbox (Safe Build Zone)

A completely safe space to build, test, and iterate. Nothing here touches the live 5S Portal or Nexus Command until Kieran explicitly approves and all 11 checkpoints pass. Build freely. Break things. Start over. Zero risk.

Element	Detail
New tab in Hub	'SANDBOX' tab in main nav. Separate from the live chat and deploy flow.
Project card	Each project shows: name, type (Function / Page / App), status badge, last modified, checkpoint progress bar (0/11).
Status flow	DRAFT → TESTING → CHECKPOINT REVIEW → VALIDATOR PENDING → APPROVED → DEPLOY READY
Code editor	Inline code preview per file. Syntax highlighted. Read-only until ENGINEER is assigned.
No auto-deploy	Code in Sandbox NEVER touches production automatically. Deploy requires manual [SEND TO PRODUCTION] after all 11 checkpoints.
VALIDATOR gate	Even in Sandbox, VALIDATOR must review before status moves to APPROVED.
Project notes	Each project has a notes field — Kieran or any AI can add context at any stage.

New Entities Required

Entity	Fields	Purpose
SandboxProject	name · description · type (function/page/app) · status · created_by · last_modified · checkpoints · project_status · deploy_approved	One record per sandbox project. Tracks all key milestones from draft to deploy-ready.
ProjectFile	project_id · filename · content · language · version · notes	One record per file within a project. Stores the actual code. Versioned so you can revert.

FEATURE 4 — File Upload in Chat

Share files directly in the Hub chat. Any AI called after the upload can reference the file — read it, analyse it, act on it. The team sees what Kieran sees.

Element	Detail
Upload button	Paperclip icon at left of chat input bar. Opens file picker on click.
Supported types	PDF · DOCX · JPG · PNG · JSON · CSV · TXT · XLSX · max 10MB per file
Preview card	After upload: file card appears in chat — filename, type icon, size, thumbnail (images). 'Shared with team' label.
AI awareness	Any AI called after upload receives: 'Kieran has shared [filename]. Contents: [extracted text / description]' in their context.
Storage	File stored in Document entity with source='AI Hub', project_id if a Sandbox project is active, tags=['hub-upload'].
Multiple files	Up to 3 files per message. Shown as a card row above the typed message.
Image analysis	If image uploaded — ARCHITECT or ANALYST can describe and analyse the visual content on request.

FEATURE 5 — Pre-Screen Feasibility Panel

Before any deep dive or build — Simpee calls RESEARCHER + STRATEGIST for a joint feasibility check. They give you the honest picture upfront: complexity, time, risks, opportunities. You decide whether to proceed. No wasted effort. No surprises mid-build.

How It Triggers

Auto-triggered when: Kieran describes a new project idea, uses words like 'build', 'create', 'develop', 'launch', 'new app'. Also manually triggered via [RUN PRE-SCREEN] button at top of Sandbox.

Report Section	Who Produces	What It Contains
Complexity Rating	STRATEGIST	LOW / MEDIUM / HIGH / VERY HIGH With one-line explanation of why.
Estimated Build Time	ENGINEER (consulted)	Realistic estimate: days / weeks. Broken into phases if HIGH complexity.
Key Risks — Top 3	THINK TANK (consulted)	What could go wrong. Ranked by impact. Plain English.
Key Opportunities — Top 3	RESEARCHER	What makes this worth building. Market context. Competitive edge.
Recommended First Step	STRATEGIST	Single most important action before any code is written.
Confidence Score	Simpee (synthesised)	0-100%. How confident the team is in the assessment based on available data.
Decision buttons	Kieran	[PROCEED TO BUILD] — creates Sandbox project and begins blueprint [NEEDS MORE RESEARCH] — routes back to RESEARCHER with specific questions [PARK FOR NOW] — saves pre-screen to Notes for later

Sample Pre-Screen Output — What Kieran Sees

PRE-SCREEN REPORT – Beauty Brand App for Asian Market Assembled by Simpee · RESEARCHER + STRATEGIST · THINK TANK consulted Complexity: HIGH Estimated Build: 6-8 weeks across 4 phases Confidence Score: 78% Top 3 Risks: 1. Influencer reliability scoring needs historical data – not available at launch [HIGH] 2. Multi-platform campaign tracking requires API integrations – 2-3 week dependency [MEDIUM] 3. Mobile-first layout requires separate QA pass – easy to miss on desktop builds [LOW] Top 3 Opportunities: 1. No direct competitor has brand + influencer + campaign in one portal in HK market 2. Tint integration already planned – unique differentiator from day one 3. 5S Portal entities already exist – 60% of the data layer is built Recommended First Step: Define the influencer scoring model BEFORE building – everything else depends on it. [PROCEED TO BUILD] [NEEDS MORE RESEARCH] [PARK FOR NOW]

BUILDER PREFIX — Paste This to Implement Blueprint v1.3.1

"Build Blueprint v1.3.1 — 5 new features for Command AI Hub (Nexus Command). PREREQUISITE: v1.3 Memory Layer must be live. All 8 AIConnector records must have intro_message, voice_style, handoff_to populated. FEATURE 1 — AUTO TEAM ASSEMBLY: When Kieran submits a message, Simpee reads it and auto-selects 2 best AIs based on question type (see routing table in blueprint). Show assembly banner: 'Simpee is assembling your team...'. Both AI chips pulse violet. Each AI responds in sequence with handoff line between them. For any deploy request, always add VALIDATOR as 3rd. FEATURE 2 — LIVE WORKING INDICATORS: Pulsing violet ring on active AI card in left panel. Slim animated progress bar at top of centre panel. Per-AI typing dots: 'RESEARCHER is working...' Handoff transition animation between response cards. Response timer in muted text below each card. Queue indicator if multiple AIs waiting. FEATURE 3 — PROJECT SANDBOX TAB: New 'SANDBOX' tab in main nav. Create SandboxProject and ProjectFile entities (schemas in blueprint). Project cards with status flow: DRAFT → TESTING → CHECKPOINT REVIEW → VALIDATOR PENDING → APPROVED → DEPLOY READY. Inline code preview per file. No auto-deploy — manual [SEND TO PRODUCTION] only after all 11 checkpoints pass. FEATURE 4 — FILE UPLOAD IN CHAT: Paperclip icon left of chat input. Supports PDF, DOCX, JPG, PNG, JSON, CSV, TXT, XLSX (max 10MB). Preview card in chat after upload. File stored in Document entity (source='AI Hub'). Any AI called after upload receives file context automatically. FEATURE 5 — PRE-SCREEN FEASIBILITY PANEL: Auto-trigger when Kieran uses build/create/launch keywords. Manually triggerable via [RUN PRE-SCREEN] button. Simpee assembles RESEARCHER + STRATEGIST. Report shows: Complexity, Build Time, Top 3 Risks, Top 3 Opportunities, First Step, Confidence Score. Three decision buttons: [PROCEED TO BUILD] [NEEDS MORE RESEARCH] [PARK FOR NOW]. Same design system: #e8e6fe bg, #5e50fb accent, Exo 2 headlines, Montserrat body. No emoji."

FULL BUILD ROADMAP — Where We Are

Blueprint	Focus	Status
v1.2.1	Role-aware chat · Gatekeeper Panel · AI Family voices · 8 member team	Send to builder — ready now
v1.3	AI Persistent Memory · OneDrive sync · Role memory files	Build after v1.2.1 passes
v1.3.1	Auto Assembly · Live Indicators · Sandbox · File Upload · Pre-Screen	This document — build after v1.3

v1.4	DESIGNER (Canva) + BRAND DIRECTOR (Looka) onboarding	Draft ready — build after v1.3.1
v1.5	Cross-portal sync — Hub memories feed into 5S Portal decisions	Future
